Fukuoka, Japan

SUMMARY

Graduate researcher specializing in Artificial Intelligence, currently pursuing a Master’s degree in Japan with research focused on multimodal recommendation systems and deep learning. Experienced in building end-to-end AI pipelines, including data preparation, model development, and evaluation. Proficient in Python, machine learning, and deep learning frameworks, with strong analytical and problem-solving skills. Previously worked as a web developer, gaining solid software engineering experience that supports practical AI deployment. Highly motivated to apply AI expertise in real-world industry settings and committed to long-term career growth in Japan.

EXPERIENCE

Graduate Researcher — Multimodal AI Recommendation Systems

04/2024 - Present

Kyushu Institute of Technology — Master’s Thesis Research ↗

- Applied machine learning and deep learning to build a multimodal recommendation system for generative AI models.
- Used image recognition techniques to extract visual features from model outputs, and applied natural language processing to process prompts and metadata.
- Implemented and fine-tuned deep learning models to improve retrieval accuracy and system understanding of user queries.
- Performed data analysis workflows, including preprocessing, feature engineering, clustering, and evaluation to validate system behavior.
- Designed and built a new system architecture supporting scalable similarity search and efficient model retrieval.
- Delivered an end-to-end AI development pipeline involving dataset preparation, model training, evaluation, and deployment-ready components.

EDUCATION

Artificial Intelligence

04/2024 - Present

Kyushu Institute of Technology - Master's Degree

- Graduate research focused on multimodal AI and recommendation systems for generative models.
- Coursework includes machine learning, deep learning, computer vision, and data engineering.

Computer Science

08/2016 - 07/2023

Universitas Hasanuddin - Bachelor's Degree

- GPA: 3.6
- Developed profile website for the Mathematics Department as part of a student project.
- Built an e-commerce web application for the final project, applying full-stack development principles.
